2. Now, click on the "Query" button. This will change the panel on the left-hand side of the window and add a drop-down tool which has all the layers you can query (get info from).

3. Clicking on the drop-down tool allows you to pick a layer. In this instance, our choice is "Parcel Boundary".

Query

I want to...

Data Source:  
Parcel Boundary

Map Area:

All

All

Current Extent

All of the following must be true

At least one of the following must be true

AIN contain 5232028

[Add Condition](#) [Add Subclause](#)

AIN

contains

4. We can now add limits to what we are looking for. Start by considering limiting the area to look over – either the whole dataset or just what we see in the present map extent.

5. Next, consider adding a condition. Here, the user has selected the AIN column and added that it “contains” and then entered in the first seven-digits of a ten-digit AIN number.

AIN contains 5232028

Now, run the Query by clicking on the Search button at the bottom.

Highlighted in Information Panel at left

6. The results from this Query:  
 AIN contains 5232028  
 are returned in the left panel. As you can see (at the bottom left) there are 27 parcels (Total: 27) that have an AIN that start with "5232028". Below that is the number of pages needed to list them in the panel. Here the Page number needed list the results as just one (Page 1 of 1) because the left-hand panel has the capacity to list 50 result items per page.

It should be noted that Queries with results returning a value greater than 50 will be returned in multiple pages, make sure to note this.

Also, Queries have a potential maximum number of 1000 results.
